

Cxcl12-iCreERT2 Bacterial Artificial Chromosome Transgenic Mice

TECHNOLOGY NUMBER: 2021-377

INNOVATION

Cxcl12-creER transgenic mice express a tamoxifen-inducible (ERT2) codon-improved iCre recombinase directed by mouse Cxcl12 (chemokine (C-X-C motif) ligand 12) promoter elements. When induced, iCre recombinase activity is observed in a subset of bone marrow stromal cells. This strain may be useful for in vivo lineage tracing and functional analysis of skeletal regeneration and a pre-adipocyte-like subset of bone marrow stromal cells.
