Exporting the Practice Oriented Research Training Program

TECHNOLOGY NUMBER: 6931

OVERVIEW

Geared towards clinicians interested in performing research

- Clinicians learn fundamentals of research practice
- Helps clinicians overcome barriers and limitations of evidence-based practice

BACKGROUND

Welcome to PORT (Practice Oriented Research Training). This program was developed to meet the needs of practicing clinicians who want to become competent and active members of the research enterprise. The materials you download will give you an overview of the PORT program, outline the steps needed to implement the program successfully, and provide a list of resources you will need to achieve program goals.

The materials are offered as a guide and can be adapted for your specific institution and local needs. This program was developed in partnership with the Michigan Institute for Clinical & Health Research (MICHR) at the University of Michigan. The PORT program includes a complete set of instructional materials: PORT Instructor's Manual reviews the overall goal of the PORT program and provides information on key characteristics for program success; a list of resources, materials and funding needed to implement the program; specialized information and tips for instructors; and other necessary elements required for successful class implementation.

PORT Session Descriptions

The session descriptions give instructors detailed descriptions of each session within the 11-week PORT classroom program, as well as suggested strategies for effective presentation of the material.

PORT Instructor Timeline

The instructor timeline document includes a sample timeline for instructor preparation, including a checklist of action items for up to six months leading up to the first classroom session and continuing through post-award actions.

PORT Syllabus and Homework Guidelines

The syllabus gives a general overview of each weeks focus and objectives, as well as detailed information about the preparation needed to contribute to class discussion. Students are given guidelines for homework assignments, including instructions for submission and the consequences of late submission.
