

# Tumorigenic Human Salivary Mucoepidermoid Carcinoma Cell Lines

TECHNOLOGY NUMBER: 5877

## INNOVATION

This technology comprises a panel of new mucoepidermoid carcinoma cell lines and describe in detail the characterization of unique cell lines representative of a tumor that was resistant to therapy. These cell lines could be used for research and discovery in the field of salivary gland cancer and for the development and testing of novel therapies for mucoepidermoid carcinoma.
